Simonis X-1 Cloth Cleaner

A billiard cloth deserves efficient cleaning. It is for this purpose that we devised and developed a totally innovative accessory: the Simonis X-1™

Description

A superior way to clean

For regular maintenance of the playing surface i.e. the removal of chalk dust, you will no longer need a traditional brush that only moves this dust around on the cloth, nor daily use of a vacuum cleaner that may damage the cloth and the use of which is therefore impractical, nor a maintenance product that is likely to stretch or discolour the cloth or alter its properties. The Simonis X-1™ deeply extracts the chalk dust from the baize and retains it in its revolutionary high-tech structure!

Use of SIMONIS X-1

The Simonis X-1 works by static electricity and by capillarity. It is therefore a very flexible and rapid back and forth movement and not the exaggerated pressure which would be needed for the optimal effectiveness of a brush.

After having cleaned the whole table, including the horizontal part of the cushions, use the Simonis X-1 to delicately brush the playing surface in parallel lines in order to give the cloth its well-kept appearance.

The Simonis X-1 possesses a high absorption capacity and can easily retain the dust of half a chalk in its textile

structure. Once the Simonis X-1 no longer seems to retain the chalk, all one has to do is release the dust absorbed by the high-tech structure to restore its initial effectiveness.

To do this, we recommend that you:

- either vacuum the textile structure
- or beat/slap the structure with your hand.

(do not hit the Simonis X-1 against a hard surface which could damage the X-1 or that same surface; do not clean the textile surface with any liquid)

Please note however that the textile surface will retain the colour of the chalk, even after having been emptied. This colouration is normal and in no way alters the effectiveness of the Simonis X-1.

The Simonis X-1 can absorb any sort of fine dust provided that it can be integrated into the high-tech structure of the X-1.
